PseudoLab 13th Project

나만의 AI Agent 자동화 프로그램 만들기 🤖

Week 1 (26.10.10)

출석 체크!

https://pseudo-lab.com/projects/538215f7-04dd-458a-be05-ad88d37e7120?tab=attendance

About Me

안녕하세요, 김건호입니다 👋

AI / 개발 / 자동화에 관심이 많은 Builder입니다.

What I’ve Done

학력

- 석사 2022.03 ~ 2024.02 KAIST 전산학부
- 학사 2017.03 ~ 2022.02 KAIST 전기전자공학부 및 전산학부

경력

- 2025.09 ~ 현재: NC AI, Vision AI Researcher
- 2024.03 ~ 2025.09: RebuilderAI, Research Scientist

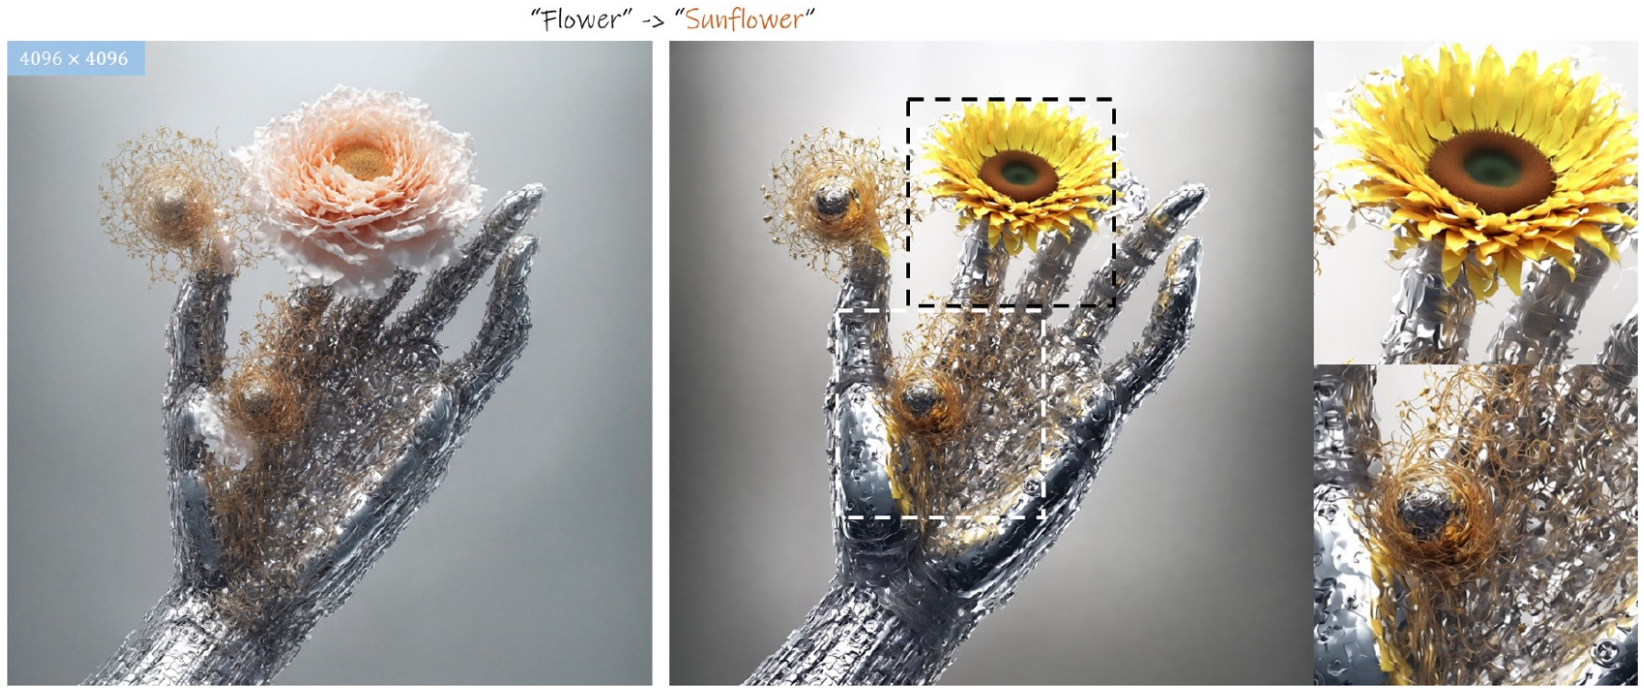

가짜연구소 활동

- 12 ~ 13기 (빌더): 나만의 자동화 AI Agent 만들기
- 8 ~ 10기 (러너): Nerd’s NeRF

What I've Done

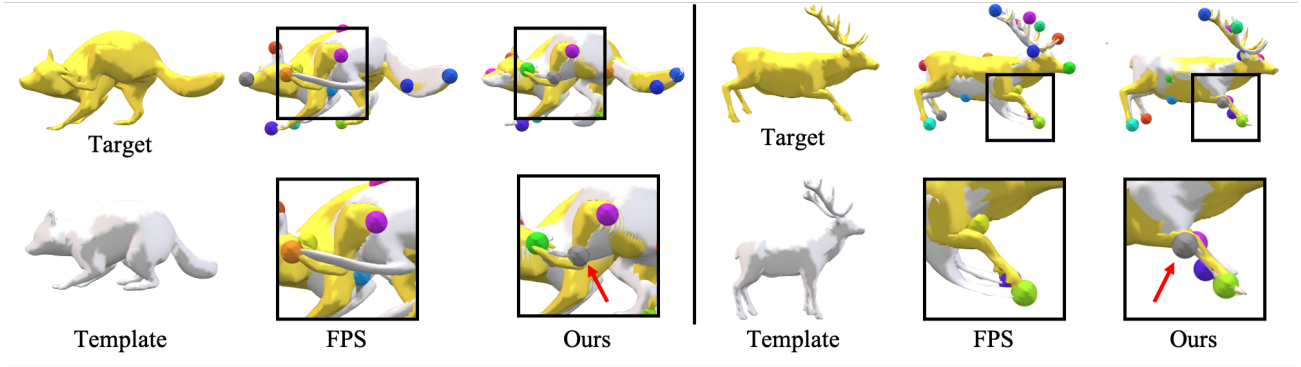

SyncDiffusion (NeurIPS 2023)

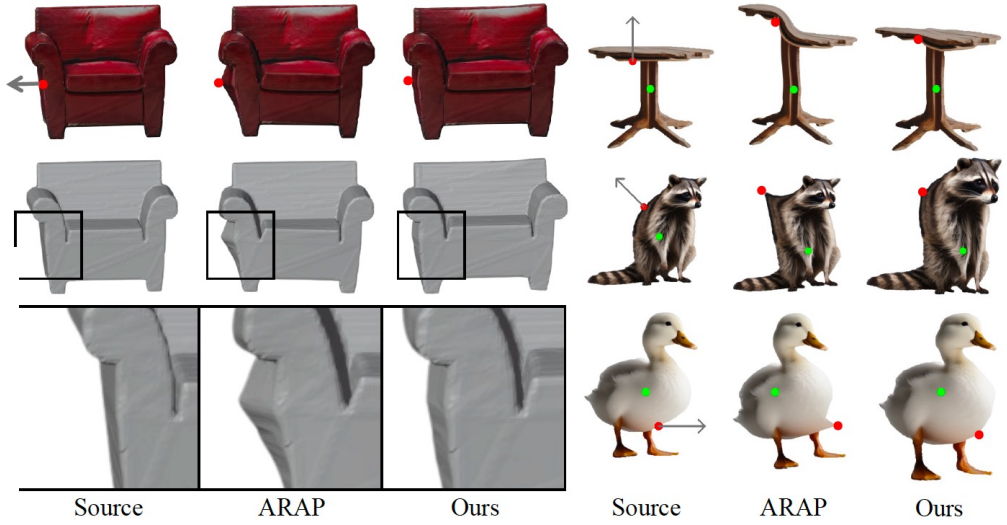

EditCrafter (CVPRW 2026)

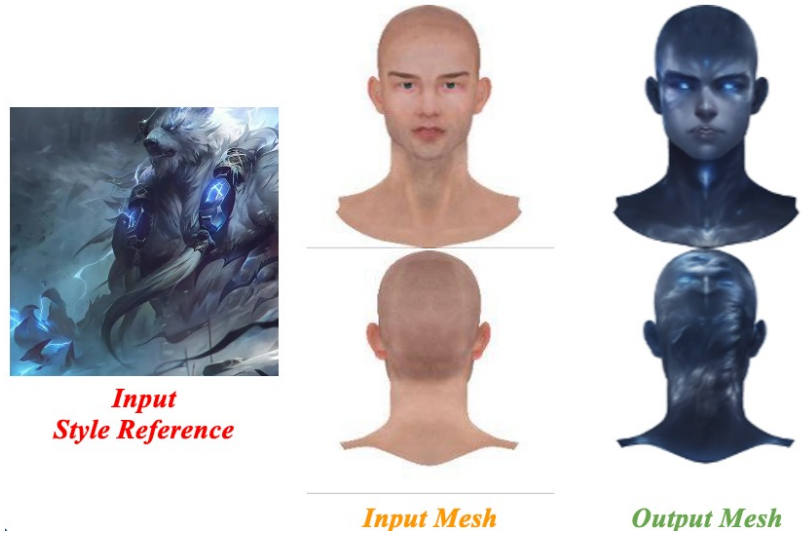

What I've Done

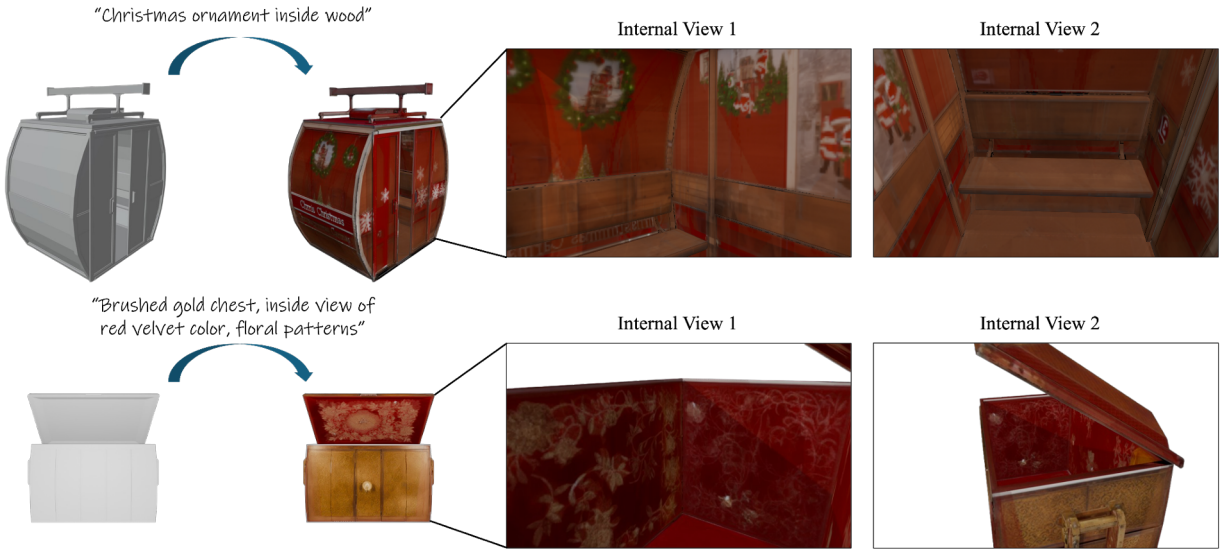

OptCtrlPoints (Pacific Graphics 2023)

APAP (CVPR 2024)

StyleMVD (ECCVW 2024)

GOATex (NeurIPS 2025)

What I’m Doing Now

요즘은 이런 것에 집중하고 있습니다

- AI Agent
- 자동화 시스템
- 생산성을 높이는 도구 만들기

Runner Introduction

러너 자기소개 🙌

- 이름
- 무엇을 해왔는지
- 최근 관심 분야

Why This Project

이 프로젝트를 빌딩한 이유

- 혼자 하면 나태해져서...
- 지금이 가장 중요한 타이밍이라고 느껴서
- 함께 만들고 성장하고 싶어서

Why This Project

이 프로젝트를 빌딩한 이유

- 혼자 하면 나태해져서...
- 지금이 가장 중요한 타이밍이라고 느껴서
- 함께 만들고 성장하고 싶어서

너무 방대한 도구들이 쏟아져서 모든 것을 테스트 해보기 힘듦

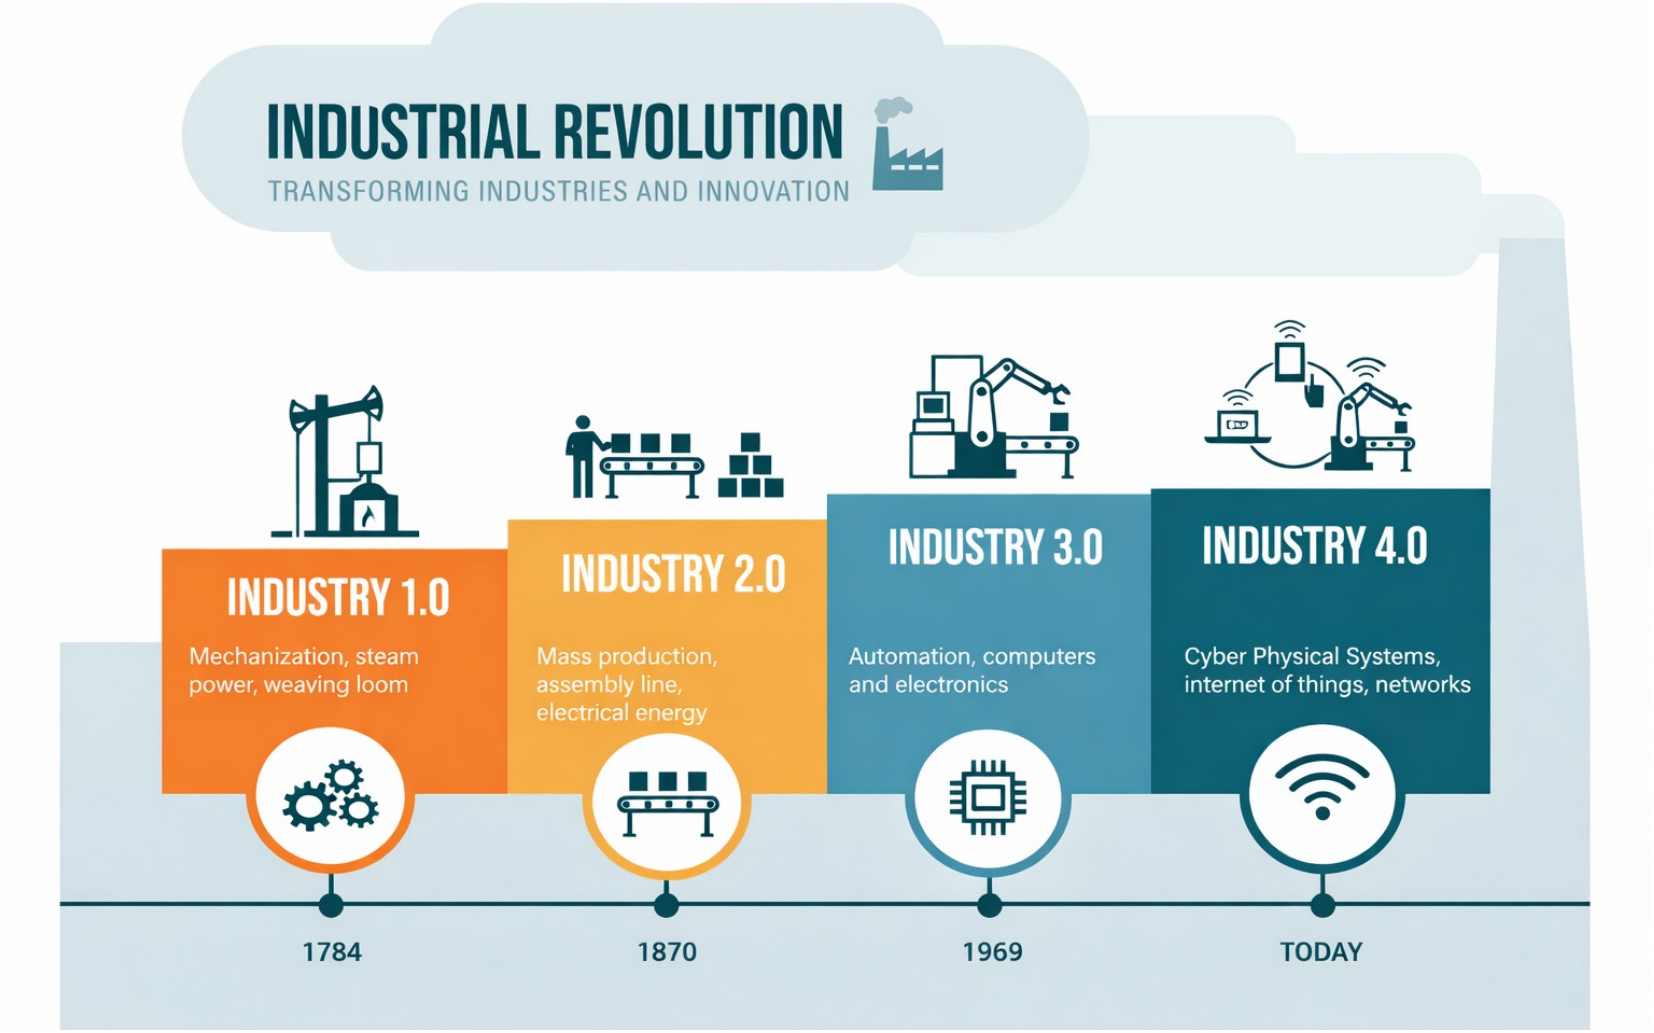

→ 서로 경험해본 AI Agent를 후기를 알려주는 커뮤니티 형성

Big Idea

AI는 더 이상 “답하는 도구”가 아닙니다

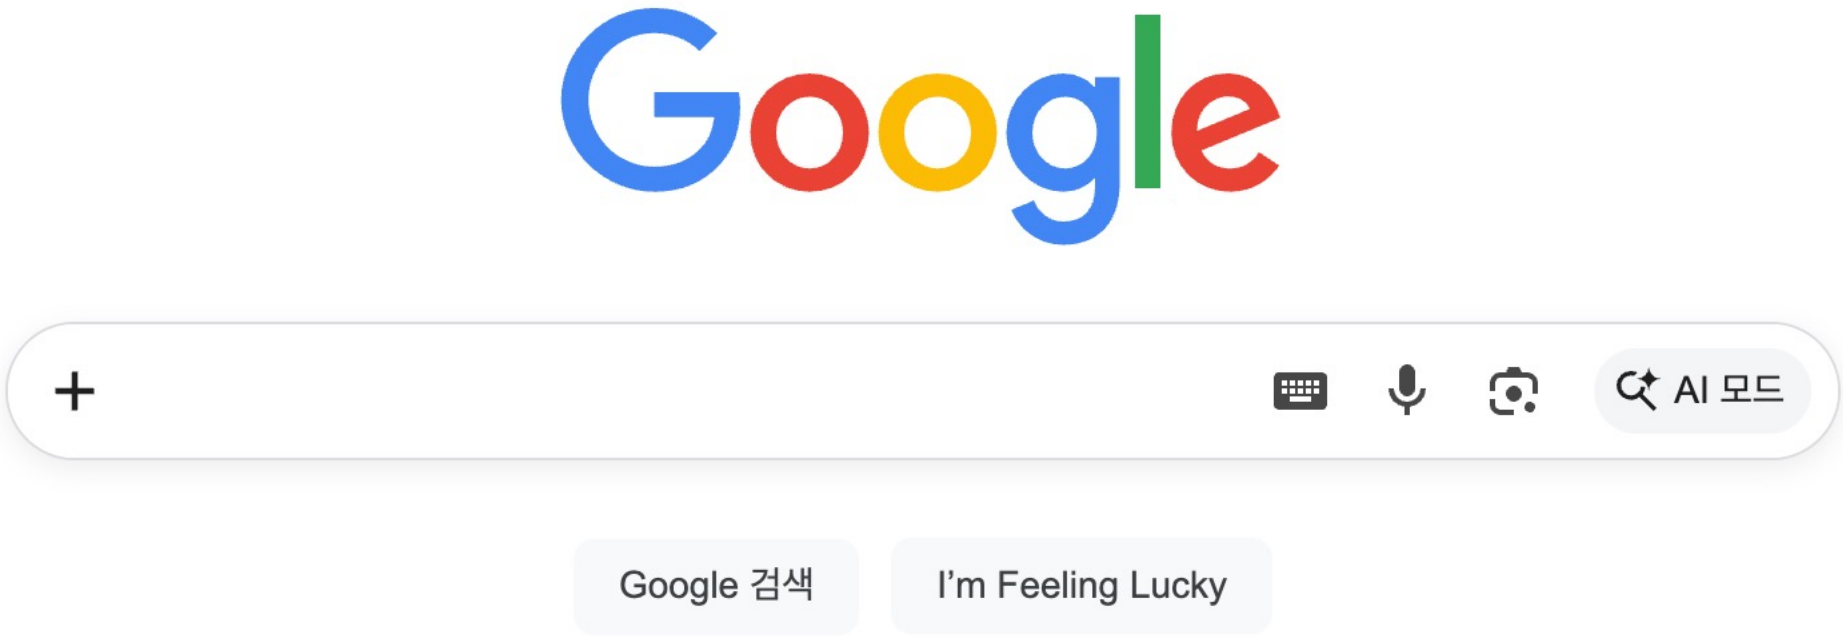

이제 AI는 “일을 수행하는 존재”가 되고 있습니다.

Paradigm Shift

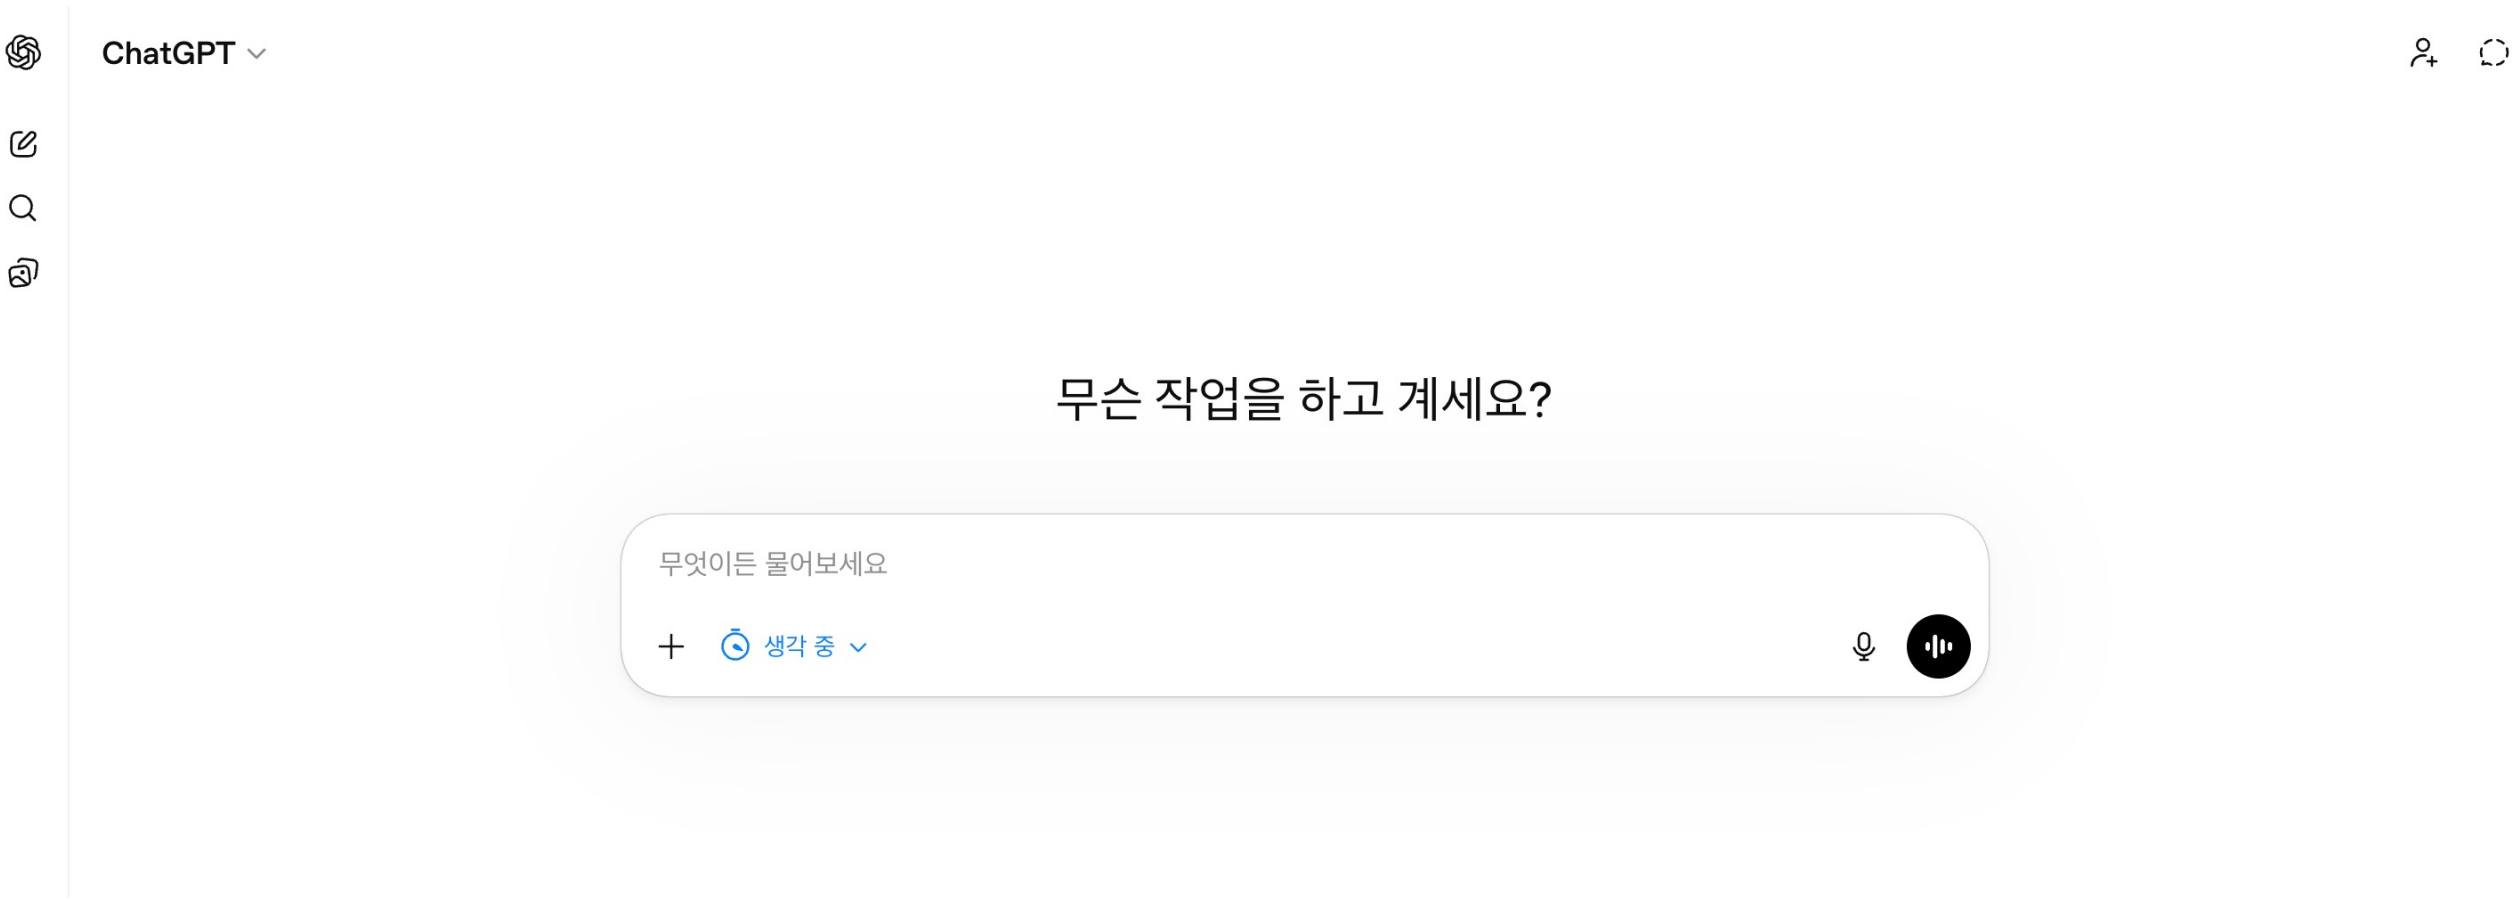

Paradigm Shift

~2022

Paradigm Shift

2022 ~ 2024

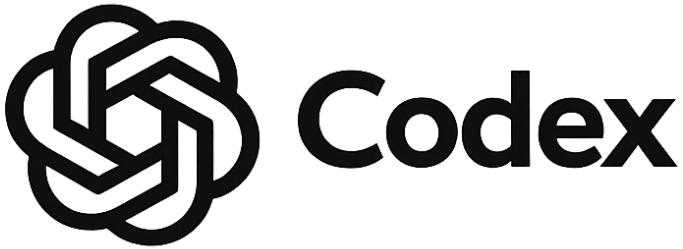

Paradigm Shift

2025~

Model Release

	2022	2023	2024	2025	~2026.10
OpenAI	ChatGPT	GPT-4 GPT-4 Turbo	GPT-4o	GPT-4.5 GPT-5	GPT-5.4 GPT-5.5 GPT-6

A few random notes from claude coding quite a bit last few weeks.

Coding workflow. Given the latest lift in LLM coding capability, like many others I rapidly went from about 80% manual+autocomplete coding and 20% agents in November to 80% agent coding and 20% edits+touchups in December. i.e. I really am mostly programming in English now, a bit sheepishly telling the LLM what code to write... in words. It hurts the ego a bit but the power to operate over software in large "code actions" is just too net useful, especially once you adapt to it, configure it, learn to use it, and wrap your head around what it can and cannot do. This is easily the biggest change to my basic coding workflow in ~2 decades of programming and it happened over the course of a few weeks. I'd expect something similar to be happening to well into double digit percent of engineers out there, while the awareness of it in the general population feels well into low single digit percent.

저도 11월에 약 80%의 수동+자동완성 코딩과 20%의 에이전트 코딩에서 12월에 20%의 편집+터치업으로 빠르게 전환했습니다

... (중략)

이는 약 20년간의 프로그래밍 기간 동안 제 기본 코딩 워크플로우에 가장 큰 변화이며, 몇 주 동안 일어난 일입니다. 저는 비슷한 일이 엔지니어의 두 자릿수 비율에 도달할 것으로 예상하지만, 일반 대중의 인식은 한 자릿수 비율이 낮을 것으로 느껴집니다.

여러 유명 인사들의 말 (3)

Jonathan T. Barron

(Principal research scientist at Google DeepMind)

2026.03.11

Jon Barron @jon_barron · Mar 11

If I was a grad student today, I would: 1) Not write papers, 2) push my (agent-written) code to a public repo ~weekly, 3) maintain (via agents) a writeup.tex (manually verified) and a skill.md in the repo, and 4) work towards establishing skill usage as the new "citation" format.

16 39 574 92K

만약 제가 오늘날의 대학원생이었다면, 저는 이렇게 했을 것입니다:

1) 논문을 쓰지 않고,

2) 제 (에이전트 작성) 코드를 Github에 푸시하고,

3) 에이전트를 통해 writeup.tex (manually 검증)와 skill.md 를 관리하며,

4) 새로운 "citation" 형식으로 기술 사용을 확립하기 위해 노력할 것입니다.

여러 유명 인사들의 말 (4)

Elon Musk

(Founder of Tesla, SpaceX, NeuralLink)

2026.03.12

Elon Musk @elonmusk · Mar 12

Macrohard or Digital Optimus is a joint xAI-Tesla project, coming as part of Tesla's investment agreement with xAI.

Grok is the master conductor/navigator with deep understanding of the world to direct digital Optimus, which is processing and actioning the past 5 secs of real-time computer screen video and keyboard/mouse actions. Grok is like a much more advanced and sophisticated version of turn-by-turn navigation software.

You can think of it as Digital Optimus AI being System 1 (instinctive part of the mind) and Grok being System 2. (thinking part of the mind).

This will run very competitively on the super low cost Tesla AI4 ($650) paired with relatively frugal use of the much more expensive xAI Nvidia hardware. And it will be the only real-time smart AI system. This is a big deal.

In principle, it is capable of emulating the function of entire companies. That is why the program is called MACROHARD, a funny reference to Microsoft.

No other company can yet do this.

여러 유명 인사들의 말 (5)

Sundar Pichai

(CEO of Google and Alphabet)

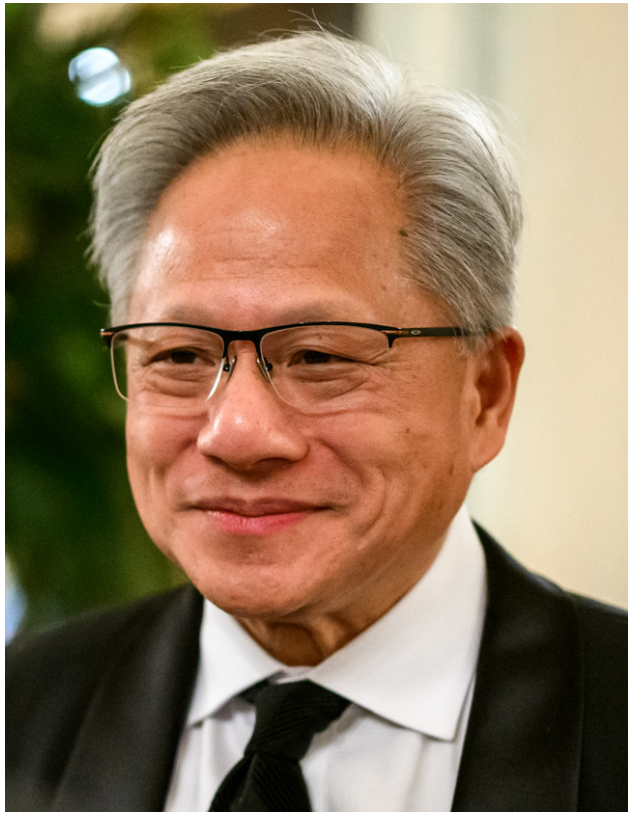

2026.04.22

- We've been using AI to generate code internally at Google for a while. Today, 75% of all new code at Google is now AI-generated and approved by engineers, up from 50% last fall.
- We're now shifting to truly agentic workflows. Our engineers are orchestrating fully autonomous digital task forces, firing off agents and accomplishing incredible things.

구글에서는 꽤 오래전부터 AI로 코드를 생성해 왔습니다. 오늘날 구글 신규 코드의 75%가 AI로 생성되고 엔지니어가 승인합니다. 지난가을 50%에서 늘어난 수치입니다.

이제 진정한 에이전트 워크플로우로 전환하고 있습니다. 엔지니어들은 완전 자율 디지털 태스크포스를 지휘하며, 에이전트를 쏘아 올려 놀라운 일들을 해내고 있습니다.

여러 유명 인사들의 말 (6)

Jensen Huang

(Founder & CEO of NVIDIA)

2026.07.09

NVIDIA

Jensen Huang says his engineers would rather build agents than write code

The Nvidia chief frames the shift as a promotion for his staff, and as more evidence that AI is creating jobs rather than cutting them.

July 9, 2026 - 8:46 am

이런 에이전트 시스템은 새로운 기술이고, 지금 우리 회사의 많은 소프트웨어 엔지니어가 에이전트를 만들고 있습니다.

제게 묻는다면, 우리 소프트웨어 엔지니어들은 하나같이 Python 코드를 작성하기보다 에이전트를 만드는 쪽을 선호합니다.

Impact

Agent = 생산성의 구조 변화

- 반복 작업 자동화

- 리서치 자동화

- 코드 생성 및 실행

1명이 10~100명의 일을 할 수 있는 시대

Conclusion

이건 유행이 아니라, 패러다임 변화입니다

Key Question

그럼 우리는 무엇을 해야 할까?

Two Options

1. AI를 사용하는 사람
2. AI를 설계하는 사람

2번이 되기 위한 프로젝트를 진행하려고 합니다

FOMO

6개월 전 내가 느끼는 감정: FOMO 😨

FOMO

6개월 전 내가 느끼는 감정: FOMO 😨

→ 현재: 못하는 것은 여전히 못한다. 인간 자체가 병목.

Reality Check

- 이미 많은 사람들이 Agent를 제작 및 사용하고 있음
- 생산성이 급격히 차이 나기 시작함

사용하지 않으면 격차가 벌어짐

Decision

나중에 따라갈 것인가, 지금 만들 것인가

Question

개발자는 사라질까?

Answer

사라지지 않습니다. 대신 바뀝니다.

Answer

LEVIT

Home Culture Team Blog Career

Problem Solver

정해진 역할이 아닌, 해결해야 할 문제를 맡습니다.

하나의 카테고리를 맡습니다.

그리고 그 카테고리를 가장 깊이 이해하는, 가장 집요하게 파고드는, 끝까지 책임지는 사람이 됩니다.
우리는 카테고리별로 작은 스타트업을 만든다고 생각합니다. Problem Solver는 해당 카테고리의 오너로서 일합니다.

- 이 카테고리에서 고객은 어떤 문제를 겪는가?
- 궁금해하는 정보는 무엇인가?
- 어떤 순간에 병목이나 판단이 어려운 지점이 생기는가?
- AI가 개입한다면, 어떤 과정이 사라질 수 있는가?
- 신뢰는 어떻게 설계할 수 있는가?

Problem Solver는 고객의 불편을 해소할 수 있는 기회를 직접 탐색하고 AI Agent를 활용한 해결 방안을 찾습니다.
의사결정 구조 자체를 해부하여 어떤 고객의 어떤 문제를, 어떤 방식으로 풀어나갈 지 스스로 정의하는 것이 출발점입니다.

문제를 찾는 방법은 하나가 아닙니다.
고객 인터뷰로 직접 목소리를 듣고, 데이터로 패턴을 발견하고, 리서치로 시장을 파악합니다.
중요한 것은 진짜 해결해야 할 문제를 발굴하고 얼마나 임팩트가 있는 문제인지 정의하는 과정입니다.

문제가 정의되면, 솔루션을 직접 만듭니다. 제품을 직접 기획하고 개발하고 배포합니다.
가설을 세우고 → 빠르게 프로토타이핑하고 → 고객에게 검증받고 → 개선하는 사이클을 반복하며 PMF를 찾아갑니다.

We Are Looking For

무신사는
'이미 완성된 개발자'보다
'함께 성장할 수 있는 개발자'를 찾습니다.

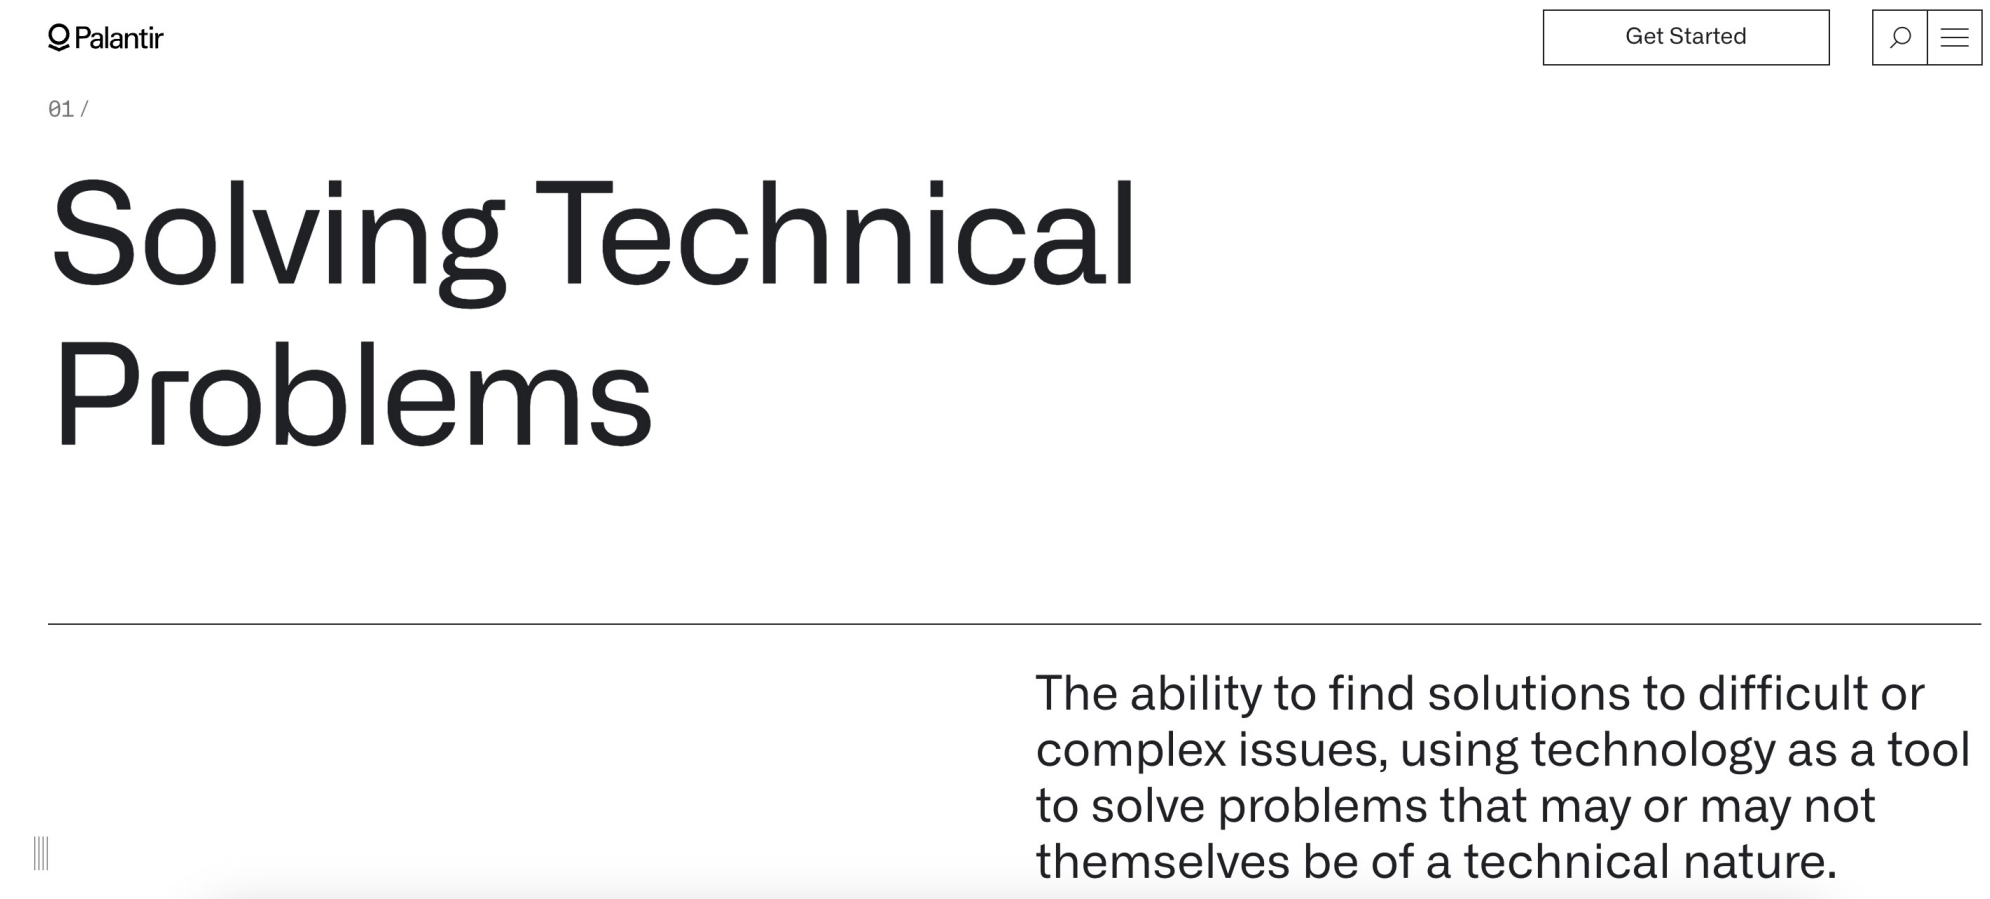

AI로의 전환은 선택이 아닌 필수입니다.
기술은 빠르게 변하고, AI는 우리의 일하는 방식을
바꾸고 있습니다.

이 변화 속에서 우리가 찾는 사람은 다음과 같습니다.

- **새로운 기술에 호기심을 가지고 빠르게 학습하는 분**
- **AI 도구를 활용해 더 나은 코드를 작성하고 싶은 분**
- **완벽한 실력보다 함께 성장하려는 태도를 가진 분**
- **실제 서비스를 만들며 사용자에게 가치를 전달하고 싶은 분**

Things a chatbot can't do

Not a roadmap. Everything here works today.

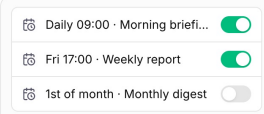

Messengers

Works where you already chat

WhatsApp, Slack, Teams, Discord, Telegram, LINE, KakaoTalk — Crew lives in every messenger you use. Start on your phone, continue on desktop. No new app to install.

- 7+ messengers supported
- Cross-channel — pick up any conversation anywhere
- Team channels — invite teammates to share one AI

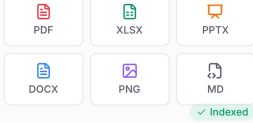

Scheduler

Automate anything on a schedule

From daily news briefs to monthly reports, set it once and Crew runs it forever. Script mode means zero AI costs for repeatable tasks.

- Agent mode for dynamic tasks, Script mode for repeatable ones
- Works with Slack, Telegram, email, and 60+ tools
- Available on all plans — Free gets 3 scheduled jobs

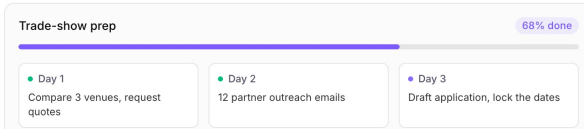

My Files

A file vault you share with your agent

Upload anything. Crew auto-indexes every document with AI — so you can ask questions or assign tasks from any chat or messenger.

- All file types supported
- Auto AI-indexing via vector embeddings
- Access from web chat & every messenger

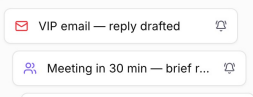

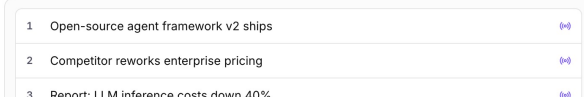

Autopilot

Set the goal. Wake up to results.

Hand Crew a one-line goal — "run an outreach to 50 US creators", "write our weekly report and ship it Monday 9am". Crew plans, executes, sends emails, schedules, and only pings you for big decisions.

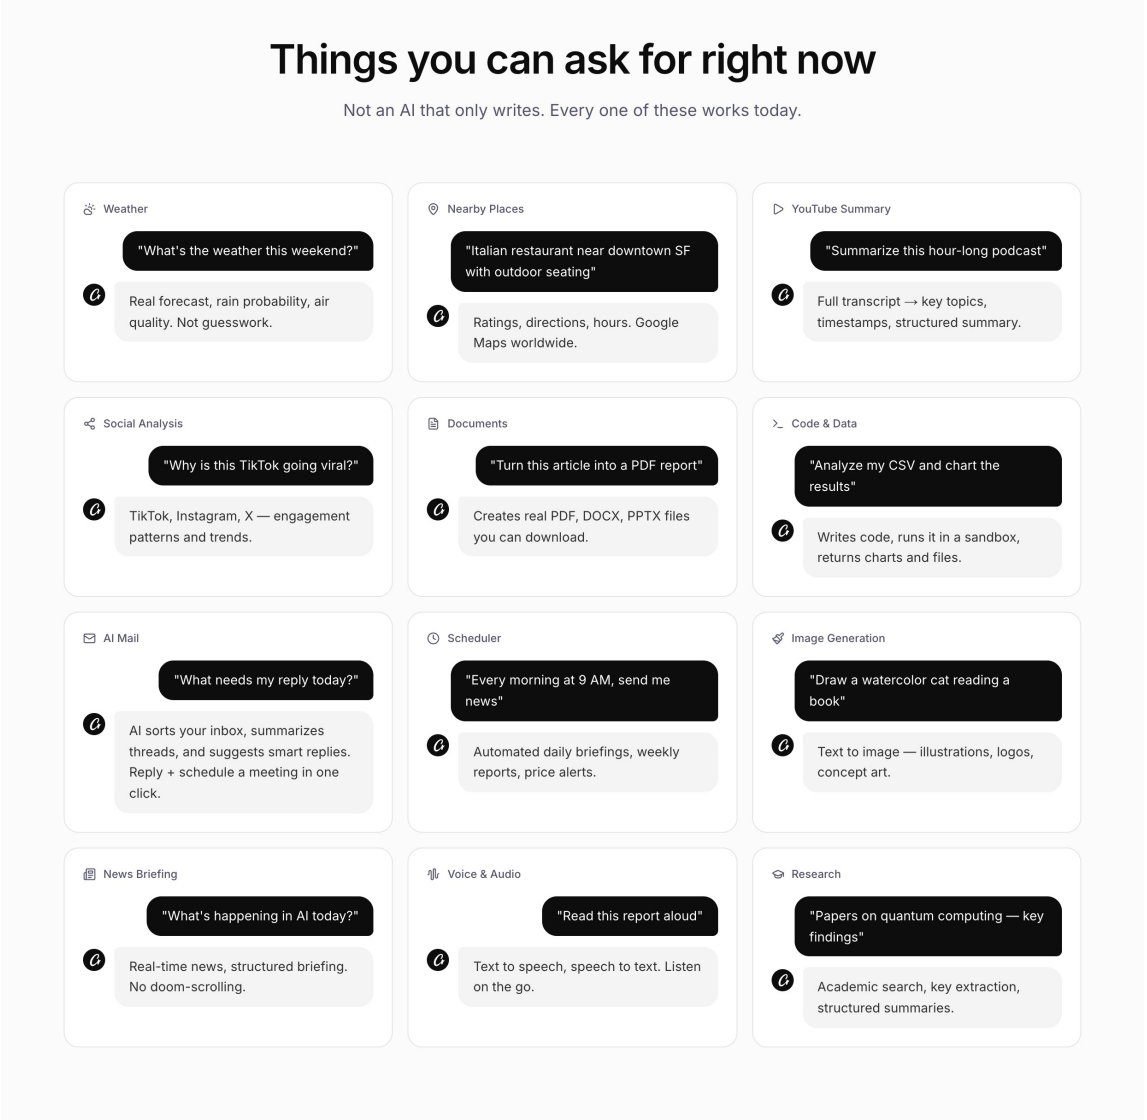

- Multi-agent missions that run for hours or days
- Three autonomy levels — Review, Balanced, Auto
- Prepay Autopilot Wallet — Pro plan gets $50/mo credit

https://crew.you/

Examples

https://crew.you/

공통점

- 계획한다
- 도구를 사용한다
- 결과를 관찰한다
- 개선 사항을 다시 반영한다
- 반복 실행한다

“Plan → Act → Observe → Reflect”

Why Personal Agent

왜 직접 만들어야 할까?

Reason

- 남이 만든 Agent는 범용적이다

- 내 문제는 내가 가장 잘 안다

그래서 우리는 직접 만든다

What We Will Do

이 프로젝트에서 하는 것

- Agent 구조 설계
- Tool 연결
- Workflow 구축
- 실제 자동화 구현

Check

현재 AI 사용 상태 체크

- ChatGPT
- Claude
- API 사용 경험

RETHINKING CROSS-TOKENIZER ON-POLICY DISTILLATION: FROM ALIGNMENT COVERAGE TO SUPERVISION RELIABILITY

Bingxi Hou, Guochao Jiang, Guofeng Quan, Weiqing Li, Wenfeng Feng, Guohua Liu, Yuewei Zhang
Alibaba Cloud Computing
{anyue.jgc, liyou.zyw}@alibaba-inc.com

ABSTRACT

On-Policy Distillation (OPD) trains a student on its own generations using teacher feedback. With different tokenizers, comparing teacher and student predictions requires alignment at both sequence and vocabulary levels. In this paper, we examine whether expanding this alignment coverage improves learning. Across three heterogeneous teacher–student pairs on mathematical reasoning and code generation, strict 1:1 groups already cover most student-generated tokens despite substantial vocabulary mismatch. On responses sampled from the students before distillation, the shared vocabulary retains nearly all teacher and student probability mass at strictly aligned positions on average. Restricting reverse KL to a student-selected top-16 subset of the shared vocabulary at each strict position achieves accuracy comparable to full shared-vocabulary OPD, outperforming the

TRACE: Rollout-Guided Quantization-Aware Training for FP4 Reinforcement Learning of MoE Language Models

Xin Wang[1,2,*,‡] Hao Yu[1,*] Zhengyang Zhuge[1,*] Bochao Mao[1]
Zheng Li[1] Junda Feng[1] Yuyan Luo[1] Yi Zhang[1]
Yizhong Cao[1,†] Mi Zhang[2,†] Dayiheng Liu[1] Jianwei Zhang[1,†]
[1]Alibaba Token Hub, Alibaba Group, [2]Ohio State University

Abstract

Reinforcement learning (RL) for post-training large language models (LLMs) incurs substantial computation and memory overhead during rollout generation, which motivates low-precision rollout for efficient RL training. However, existing FP4 RL methods suffer from a key limitation: they primarily optimize quantization accuracy on the training and rollout paths independently rather than directly reducing the discrepancy between the two quantized execution paths. In this work, we propose TRACE (Train-Rollout Quantization Alignment via Compact GuidanceE), an FP4 quantization framework for RL training of Mixture-of-Experts (MoE) language models that addresses the limitation of existing FP4 RL methods. TRACE incorporates rollout-guided quantization-aware training that uses rollout-side quantization outcomes to guide training-side FP4 rounding decisions, directly reducing train-rollout discrepancy. Moreover, TRACE adopts an efficient quantization-information caching scheme that selectively retains mantissa and scale

DuoMatching: Joint-Marginal Distribution Matching for Few-Step Video Generation

Jiahao Zhan[1,2] Yan Wang[2] Yongrui Ma[1,2] Qunliang Xing[2]
Ruchang Yao[1] Runtao Liu[1] Shijie Zhao[2†] Tianfan Xue[1,3†]

[1]MMLab, CUHK [2]ByteDance Inc. [3]HKUST [4]CPII under InnoHK

Abstract

Streaming video generation has benefited from distribution matching distillation (DMD), which matches the joint distribution of video frames to a video teacher's approximation of the real video distribution. Although this joint matching mitigates drift during autoregressive rollouts, limitations remain in visual quality and semantic alignment. To address these limitations, we propose DuoMatching, a distribution matching framework that approximates the real video distribution through a unified joint-marginal formulation. On top of existing joint matching formulations, the additional marginal matching objective provides dedicated frame-level supervision from an image
